IN THE CLAIMS

(Currently Amended) A method <u>for upgrading a database</u>, comprising:
 updating a message from a first version to an upgraded version by chaining
 through intermediate versions, wherein updating comprises:

receiving an update message having a first version format; and repeatedly generating a revised update message having a next most recent version format based on the update message until a final update message having an upgraded version format is generated.

2. (Previously Presented) The method of claim 1, wherein generating a revised update message having a next most recent version format includes:

receiving a first update message; and

calling a next most recent version mapping function to map contents of the first update message to generate a second update message.

- 3. (Original) The method of claim 1, wherein the update message includes a set of records for a database in the first version.
- 4. (Original) The method of claim 3, wherein the set of records for the database in the first version is a complete set of records for the database.
- 5. (Previously Presented) An article of manufacture comprising:

a computer readable medium having instructions stored thereon, which when executed by a data processing system, causes the data-processing system to perform a method, comprising:

receiving an update message having a first version format; and generating repeatedly a revised update message having a next most recent version format based on the update message until a final update message having an upgraded version format is generated.

6. (Previously Presented) The article of manufacture of claim 5, the method further comprising:

receiving a first update message; and

calling a next most recent version mapping function to map contents of the first update message to generate a second update message.

- 7. (Previously Presented) The article of manufacture of claim 5, wherein the update message includes a set of records for a database in the first version.
- 8. (Previously Presented) The article of manufacture of claim 7, wherein the set of records for the database in the first version is a complete set of records for the database.
- 9. (Previously Presented) An apparatus for updating a message from a first version to an upgraded version by chaining through intermediate versions comprising: means for receiving an update message having a first version format; and

Application No.: 09/295,690 -3- Attorney Docket No.: 81862.P122

means for repeatedly generating a revised update message having a next most recent version format based on the update message until a final update message having an upgraded version format is generated.

- 10. (Previously Presented) The apparatus of claim 9, further comprising: means for receiving a first update message; and means for calling a next most recent version mapping function to map contents of the first update message to generate a second update message.
- 11. (Original) The apparatus of claim 9, wherein the update message includes a set of records for a database in the first version.
- 12. (Original) The apparatus of claim 11, wherein the set of records for the database in the first version is a complete set of records for the database.
- 13. (Currently Amended) An apparatus <u>for upgrading a database</u>, comprising:
 a network switching device to receive an update message having a first version
 format; and,

a controller card to update a message from a first version to an upgraded version by chaining through intermediate versions, the controller card to repeatedly generate a revised update message having a next most recent version format based on the update message until a final update message having an upgraded version format is generated.

- 14. (Previously Presented) The apparatus of claim 13, wherein the network switching device receives a first update message.
- 15. (Previously Presented) The apparatus of claim 14, further comprising:

 a mapper to call a next most recent version mapping function to map contents of
 the first update message to generate a second update message.
- 16. (Previously Presented) The apparatus of claim 13, wherein the update message includes a set of records for a database in the first version.
- 17. (Previously Presented) The apparatus of claim 16, wherein the set of records for the database in the first version is a complete set of records for the database.
